

IN THE CLAIMS

Claims 1-8. (Cancelled)

9. (Currently amended) A resin coated steel sheet comprising a galvanized alloy steel sheet and an organic resin layer formed on at least one surface of said galvanized steel sheet;

wherein a galvanized alloy plating is formed on at least one surface of a steel sheet and the sheet having the galvanized alloy thereon is treated with an anodic/~~cathodic~~ treatment in acid solution, wherein the composite is the same as that in the plating bath or the composite includes at least one ion selected from the group consisting of Zn ion, Co ion, Ni ion, Mo ion, Fe ion, Sn ion, Cu ion, nitride~~r~~ ion, sulfate ion, phosphate ion, and ammonium ion, wherein the at least one surface of the galvanized alloy steel sheet is blackened to have an L-value equal to or less than 30.

10. (Currently amended) A resin coated steel sheet comprising a galvanized alloy steel sheet and an organic resin layer formed on at least one surface of the galvanized alloy steel sheet, ~~there~~ wherein a galvanized alloy plating is formed on at least one surface of a steel sheet and the sheet having the galvanized alloy thereon is treated by an anodic/~~cathodic~~ treatment in

acid solution, wherein the composite is the same as that in the plating bath or the composite includes at least one ion selected from the group consisting of Zn ion, Co ion, Ni ion, Mo ion, Fe ion, Sn ion, Cu ion, nitride ion, sulfate ion, phosphate ion, and ammonium ion, wherein the at least one surface of the galvanized alloy steel sheet is blackened to have an L-value equal to or less than 30, and said organic resin layer includes at least one of colloidal silica and an agent providing a lubricant function at a surface of the organic resin layer.

11. (Previously added) The resin coated steel sheet according to claim 9 wherein the resin is selected from the group consisting of urethane resins, polyester resins, acrylic resins, and olefin resins.

12. (Previously added) The resin coated steel sheet according to claim 10 wherein the resin is selected from the group consisting of urethane resins, polyester resins, acrylic resins, and olefin resins.

13. (Currently amended) The resin coated steel sheet according to claim 9 wherein the resin is a urethane resin having a pencil hardness of individual

resin ~~or~~ of H to 6H, a tensile strength of 300 to 500 kg/cm² and an extension ratio of 250 to 450%.

14. (Currently amended) The resin coated steel sheet according to claim 10 wherein the resin is a urethane resin having a pencil hardness of individual resin ~~or~~ of H to 6H, a tensile strength of 300 to 500 kg/cm² and an extension ratio of 250 to 450%.

15. (Previously added) The resin coated steel sheet according to claim 10 wherein the organic resin layer includes colloidal silica of equal to or less than 50 wt%, polytetrafluoroethylene, and optionally 20 wt% or less of at least one of polytetrafluoroethylene or polyethylene wax.

16. (Previously added) The resin coated steel sheet according to claim 9 wherein the organic resin layer includes at least one member of the group consisting of 0.01 to 3 wt% anti-rust agent, 0.05 to 1 wt% silane coupling agent, and 0.1 to 3.0 wt% black pigment.

17. (Previously added) The resin coated steel

sheet according to claim 10 wherein the organic resin layer includes at least one member of the group consisting of 0.01 to 3 wt% anti-rust agent, 0.05 to 1 wt% silane coupling agent, and 0.1 to 3.0 wt% black pigment.

18. (Previously added) A patrone cap made of a resin coated steel sheet according to claim 9.

19. (Previously added) A patrone cap made of a resin coated steel sheet according to claim 10.

20. (Previously added) A patrone body made of a resin coated steel sheet according to claim 9.

21. (Previously added) A patrone body made of a resin coated steel sheet according to claim 10.
